1 P47-13(3)

$$\begin{aligned}
&((x_1 * x_2)^{-1})_{M[\sigma]} \\
=&I(^{-1})((x_1 * x_2)_{M[\sigma]}) \\
=&(n - (x_1 * x_2)_{M[\sigma]})) \bmod n \\
=&(n - I(*)({x_1}_{M[\sigma]}, {x_2}_{M[\sigma]}) \bmod n \\
=&(n - ({x_1}_{M[\sigma]} +_n {x_2}_{M[\sigma]})) \bmod n \\
=&(n - (\sigma(x_1) +_n \sigma(x_2)) \bmod n \\
=&(n - (1 \bmod n) +_n (2 \bmod n)) \bmod n \\
=&-3 \bmod n
\end{aligned}$$

$$\begin{aligned}
&((x_1)^{-1} * (x_2)^{-1})_{M[\sigma]} \\
=&I(*)[(x_1^{-1})_{M[\sigma]}, (x_2^{-1})_{M[\sigma]}] \\
=&I(*)[I(^{-1})(\sigma(x_1)), I(^{-1})(\sigma(x_2))] \\
=&((n-1) \bmod n) +_n ((n-2) \bmod n) \\
=&-3 \bmod n
\end{aligned}$$

Since $((x_1 * x_2)^{-1})_{M[\sigma]} = ((x_1)^{-1} * (x_2)^{-1})_{M[\sigma]}$, by Definition 3.12(2), p36, $A_{M[\sigma]} = T$.

2 P47-14(2)

Lemma 1: $\models A \Rightarrow \models \forall x.A$. ($\Leftrightarrow$ indeed).

*This document is maintained on `https://github.com/sleepycoke/Mathematical_Logic_NJUCS`

Proof. By $\models A$, we have for any (M,σ), $A_{M[\sigma]} = T$. Therefore for any $a \in M$, $A_{M[\sigma[x:=a]]} = T$(note that $\sigma[x := a]$ is one specific assignment of all the σ s), which implies $\forall x.A_{M[\sigma]} = T$, aka $M \models_\sigma \forall x.A$. As a result, since (M,σ) is arbitrary, $\models \forall x.A$. $\square$

Let $A := (x \doteq y \to y \doteq x)$,

$$
\begin{aligned}
&A_{M[\sigma]}\\
=&B_{\to}[(x \doteq y)_{M[\sigma]}, (y \doteq x)_{M[\sigma]}]\\
=&\begin{cases} F & \text{if } (x \doteq y)_{M[\sigma]} = T \text{ and } (y \doteq x)_{M[\sigma]} = F \\ T & \text{otherwise} \end{cases}
\end{aligned}
$$

However, $(x \doteq y)_{M[\sigma]} = T$ implies $\sigma(x) = \sigma(y)$, which implies $\sigma(y) = \sigma(x)$ and $(y \doteq x)_{M[\sigma]} = T$. Thus $A_{M[\sigma]} = T$. Applying Lemma 1 twice we get

$$\models \forall x \forall y.A.$$

3 P49-24

$\Rightarrow$

$$
\begin{aligned}
&M \models_\sigma \forall x.A\\
\Rightarrow&\text{For all } \sigma(z) \in M, A_{M[\sigma[x:=\sigma(z)]]} = T.\\
\Rightarrow&\text{For all } a \in M, \forall z.A[\frac{z}{x}]_{M[\sigma[z:=a]]} = T, \text{ by Lemma 3.24, p40.}\\
\Rightarrow&M \models_\sigma \forall z.A[\frac{z}{x}]
\end{aligned}
$$

$\Leftarrow$

$$
\begin{aligned}
&M \models_\sigma \forall z.A[\frac{z}{x}]\\
\Rightarrow&\text{For all } a \in M, A[\frac{z}{x}]_{M[\rho]} = T, \text{ where } \rho := \sigma[z := a].\\
\Rightarrow&\text{For all } a \in M, A_{M[\rho[x:=z_{M[\rho]}]]} = T, \text{ by Lemma 3.24, p40.}\\
\Rightarrow&\text{For all } a \in M, A_{M[\rho[x:=a]]} = T.\\
\Rightarrow&\text{For all } a \in M, A_{M[\sigma[x:=a]]} = T, \text{ since } z \text{ is fresh in } A.\\
\Rightarrow&M \models_\sigma \forall x.A
\end{aligned}
$$
